STEVEN GARCIA

SOFTWARE DEVELOPER

WORK EXPERIENCE

Software Developer Intern
Thomson Reuters | June - August 2020 (10 weeks)

- Implemented unit tests for Angular components, reducers, and selectors in Jasmine to ensure code quality
- Improved components to have responsive SCSS styles to match the design specification by UI/UX designers
- Created a Page Title feature with NgRx (Redux) state management for displaying on-premise environment configuration
- Updated dialog components to enable popup windows to have the ability to maximize and resize for improved UI/UX

PROJECT EXPERIENCE

BucketList Social Network App - bucket-list-items.herokuapp.com
https://github.com/stevenGarciaDev/MyBucketList-UI
https://github.com/stevenGarciaDev/MyBucketList-API
React | Redux | Node.js | Mongoose | MongoDB | Git | Express

- Developed a Single Page Application enabling create, read, update, and delete operations
- Used Redux-Thunk for asynchronous middleware calls to Node.js API to retrieve JSON data for bucket list page
- Implemented user authentication and authorization with JSON Web Tokens and bcrypt library for hashing secure passwords
- Utilized Yelp Fusion API for restaurant recommendations
- Ensured responsive design by using Flexbox and media queries
- Created the model schema in Mongoose for backend database
- Used modern ES6 features of async/await for handling promises when making HTTP service calls to API

Sustainability Project Web Application
https://github.com/stevenGarciaDev/sustainability_project
https://github.com/stevenGarciaDev/sustainability_project-api
React | *React Hooks | Node.js | Postgresql*

- Developed user interface components and RESTful API endpoints for home, connect, and profile pages
- Implemented responsive design with Styled Components and media queries
- Integrated thirty party service, Cloudinary, for image upload and storage for user profiles
